Cool or heat selected zones

Introducing Brivis Zoning Solutions

Imagine this. It is a 14 degree day outside, you are in the lounge room watching your favourite movie, your partner's in the study reading a book, and your kids are in the rumpus playing games. With Brivis StarPro high efficiency ducted gas heater technology, you have two zoning options:

Brivis ZonePlus

For outstanding individual comfort, control and energy management, the Brivis ZonePlus allows you to have up to four individually controlled zones, each with their own time and temperature settings.

For total flexibility, you can upgrade as many Brivis Temperature Sensors to Brivis Networkers, allowing you to fully control, program and manage each zone – eliminating the need for you to go back to the Master Networker. Adjust temperatures for each zone as it suits you from any Networker in the home. Perfect comfort, absolute control.

Brivis ZonePlus works in unison with any Brivis StarPro Ducted Gas Heater with, 4, 5 and 6 star efficiencies. It can also operate your Brivis Dual Comfort system for the ultimate integrated heating and cooling comfort control solution.

Brivis Adaptive Zoning

Allows heating or cooling to be used with one Brivis Networker, operating a common zone (i.e. the hallway), as well as up to four additional zones, e.g. lounge room, bedrooms, kitchen/dining etc.

A Brivis Networker can simply turn zones on or off to manage only those areas you are using.

Everyone's comfort
levels are different
and ZonePlus has
taken this on board

Everyone's comfort levels are different

Flexible Cooling and Heating

A Brivis zoning system provides you with the flexibility to cool or heat up to four independent zones. A zone can be a single room, like a lounge room or a designated set of rooms, like children's bedrooms. You can also condition your entire home. A Brivis zoning system can detect how many zones you are currently operating and automatically adjust its output to match the requirement. This means that if you only want certain parts of your home heated or cooled, you can, while not wasting energy.

The Brivis Networker zoning controller allows you to operate your comfort system in either auto or manual modes.

In auto mode, the Brivis Networker allows you to programme temperatures, times and zoning configurations to suit your lifestyle. This means that you can wake up to a beautifully warm home on winter mornings, or in the evenings when you arrive home from work.

In manual mode, you set your own temperature. The Brivis Networker will maintain the temperature you have chosen, until you choose to turn it off.

Operate your comfort system in either auto or manual modes

Climate

With ZonePlus, choose your climate for any room in the house, from anywhere in the house. You have the flexibility to cater to everyone's ideal climate level anytime of the day.

Control

ZonePlus allows total control of all zones in your home no matter where you are. Control different climate levels in different zones, optimise heating up and cooling down times, have total control of your comfort and energy use. Even switch zones off. You're in control.

Comfort

Everyone's comfort levels are different and ZonePlus has taken this on board. No matter what your comfort level is, each zone is completely within your control. Bravis Networkers in every zone allows easy management.

Benefits of ZonePlus

Reduce your energy costs

Switching off unused zones not only helps reach your set temperature faster, but will also save you lots on your energy bill. For example, in a home with four zones, turning off two zones can save you up to 50% off your running costs.

Adjusting your comfort levels moderately can also make big changes to your energy bill. For instance, when cooling, increasing the temperature setpoint by 1°C will reduce the amount of power your system uses by up to 10%

Save money

A large home may require, for example, a 20kW system to effectively heat or cool the entire home.

In consultation with a dealer, you may find that you will only ever use half your rooms at any one time – hence a 10kW system would suit. Providing a significant up-front cost saving and minimising running costs.

Get more comfortable quicker

With the option of Bravis Networkers in every zone, you no longer need to rely on one central Networker managing your entire home. Controlling your climate is only ever a few steps away. How convenient is that?

Plus, by only heating or cooling the zones you are using, this helps optimise output, which means you reach your desired temperature sooner.

Zoning made easy

One control for total flexibility

The Brivis Networker provides you with maximum flexibility. Featuring Electro-Luminescence (EL) technology which makes it easy to read, it allows you to preset ON-OFF times, and set and forget the comfort level you desire. So smart, it even controls your Brivis Evaporative Cooler (no zoning).

Consult a Brivis Specialist dealer to design and install a Brivis ZonePlus system to suit your home and lifestyle.

Brivis Networker

Networker Features

- Electro- Luminescence (EL) technology
- Large on-screen icons
- LCD backlit display screen
- Temperature dial
- Preset ON-OFF times

Sensor Features

- Slimline
- Discrete
- Non Volatile Memory
